

Usability Testing

Scenario:

Ralph is a photographer and loves the outdoors but often needs reminders and alerts to keep him prepared for when it is about to rain.

Tasks:

1. Check the weather for the rest of the day
2. Turn on notification for an hourly update
3. Use the search bar to look up a new location and add it to the home screen

Notes:

What changes should I make to the application?

1. Create a favorite button to save locations that you search for to the home screen, so the user does not have to continuously search for that location
2. Allow the user to access alert settings from the alerts tab
3. Make the app able to display more than just 4 hours of weather on the home screen

What should I keep the same?

1. Keep the tabs on the bottom on the home screen
2. Keep the search bar at the top of the home screen
3. Keep the switch layout in settings
